Upcoming August, 2019 Classes

See the ACL website https://agecomputer.org/ for complete class description and future classes.

REGISTER ONLINE  (Classes will be cancelled 48 hours ahead if not enough enrollees.)

Windows 10

**Windows 10 Introduction** (Tuesday, August 13 at 1:00 p.m. – $25)
This seminar will help you understand the Windows 10 operating system. We will cover topics that range from an initial Windows 10 upgrade or setup, to the features not found in newer versions of Windows 10.
All student computers in the classroom have Windows 10 installed. This class includes some lecture but is mostly hands-on.
Questions about Windows 10 are encouraged. Topics covered in the class will be driven by students’ questions and interest.

Photography

**Shooting Flowers Creatively**  (Wednesday, August 14, at 1:00 p.m. – $25)
Are you tired of shooting beautiful flowers the same way, every time because they turn out OK? This class will take you into the creative world of composition and shooting combined with light and props to make your flower photos truly works of art. Ansel Adams shot the same mountain hundreds of times as well as famous painters painting the topic over and over again.
We will shoot the same flowers or flower in a variety of situations talking about and learning the features of our phones and cameras as we go. It will be indoors because of the heat and sun outside.

Healthcare Data

**Find Your Own Healthcare Data**  (Friday, August 23 at 10:00 a.m. – $25)
On average, you are likely to be in a healthcare setting 17 times during the year. Each of these visits can generate a lot of new health information about you. Where can you find this health information? What are the best ways to store it and share it with future healthcare providers? If you have a medical emergency, how can you make sure the first responders know your medical information? Are there ways to make your next new doctor visit easier and faster?
This class will teach you how to find and organize your healthcare information. This is a special class, as one of the instructors is a retired doctor! If there is time, you can try to access your own health data during class, so you may want to bring your own device (Phone, tablet, USB flash drive) to store the information.
